APPLICATION:

Presently the Valve lapping operation is done manually and has following major drawbacks:
1. Low Rate of Production.
2. High cost of operation.
3. Requirement of Skilled Labour.
4. Inconsistency in Lapping.

Autolap machine besides mechanising the operation will overcome all the drawbacks that are associated with Manual Lapping. Due to simultaneous Lapping of 4 or 6 valves at a time at optimum lapping speed, production rates as high as 5 to 6 times can be achieved with remarkable degree of Consistency. The operational simplicity of the machine enables use of unskilled labour. All these factors result in considerable reduction in operational cost. We also manufacture lapping machines as per Customer’s requirement to Suit their cylinder heads and valves.

We don’t only sell machines, we also build relationship.
